FOREWORD

The first exhibition of Indian Scientific and Technical Publications was organized by the CSIR in 1960 and a bibliography of these publications, containing 4801 entries, was compiled. It covered all the Indian scientific and technical publications brought out up to 1959 in English and various regional languages of the country.

The present bibliography covers scientific and technical publications published in India from 1960 to 1965 and contains references pertaining to 4492 books and 768 periodicals, giving a stimulating impression of advancement of scientific and technological literature produced in the country during the last 5 years. For proper utilization of this wealth of information, books and periodicals have been classified in a way that the scientists and technologists can easily get at the source material, around which a bibliography on any scientific subject can be developed.

An analysis of the publications received highlighted the paucity of scientific reading material for children; at present it is limited to some stray ephemeral publications, necessitating greater activity in this sphere.

Considering the tremendous literature that was to be handled, the job has been well done in embodying all the information in this volume. This is a work of great merit and utility and there is no doubt that this volume will remain an indispensable work of reference for many years to come.

INTRODUCTION

For organizing the second exhibition of scientific and technical publications, brought out in the country from 1960 to 1965, the Council of Scientific & Industrial Research addressed 4,500 letters, enclosing circulars giving outline of procedure for participation in this exhibition, to publishers of scientific and technical publications including Universities, Research Institutions, Industrial Laboratories, Learned Societies, Technical Institutes, Agricultural, Veterinary and Medical Colleges, Directors of Public Instruction, Directors of Industries and all other Central and State Government departments dealing in scientific and technical publications. Also, more than a hundred individuals were personally contacted and their cooperation in this exhibition sought. The exhibition was advertised in the selected newspapers in different parts of the country. To make the publicity more effective and to draw better attention of both the publishers and general public, two press releases were also issued. The last date of receipt of publications was October 15, 1965, but this was extended by another month.

The response has been quite encouraging. About 6,000 books and periodicals have been received for display. Quite a number of these publications can, however, be categorized as ephemera, i.e. publications of not abiding value, and are not included in this bibliography. After the scrutiny of literature, it was felt that a number of publications in some of the regional languages were not received; this gap was filled up by borrowing missing publications from the National Library, Calcutta.

The publications are arranged in one classified sequence, according to the Dewey Decimal Classification, the language symbol being given at the end of the entry. An outline of the Dewey Decimal System of Classification (16th edition) and a chart of the language symbols have been given. Titles of books in the Indian languages and names of Indic Authors in the text as well as in the Author Index are transliterated into Roman script with diacritical marks wherever necessary. The Hunterian system of transliteration has been used. Several attempts to establish clearly defined categories of subjects were made but overlapping of subjects made it extremely difficult.

The entries relating to periodicals form a separate section and have been listed in alphabetical sequence. In order to avoid duplication, bibliographical details have been given only for those periodicals which are not covered by the Directory of Indian Scientific and Technical Periodicals published in 1964 by INSDOC, New Delhi. For all entries of books, serial numbers have been provided to facilitate the reader. Distribution of books and periodicals in various Indian languages is given in Tables 1 and 2.

A list of Indian publishers dealing in scientific and technical literature, along with their addresses, is also included.

The compilation of this volume is mostly based on published information; the Indian National Bibliography being the main source. Also, National Library, Calcutta, very kindly sent us from their records unpublished references relating to the scientific and technical publications, brought out up to June 1965, for inclusion in this volume.

I am indeed grateful to Dr S. Husain Zaheer, Director-General, Scientific & Industrial Research for his personal interest in the organization of this exhibition without which it would have been extremely difficult to overcome the financial difficulties. And I must express my deep gratitude to Shri K. Kashyapa and other colleagues of mine who assisted me in the compilation of this bibliography and who brought to a close this arduous and complex project in record time of 2 months. I am very thankful to Shri Y. M. Mulay, Librarian, National Library, Calcutta, for his timely help and ever ready cooperation. My grateful thanks are also due to Sree Saraswaty Press Ltd, Calcutta, for their undertaking the printing of this volume on priority basis and bringing it out on time.
